# Fluorofil<sup>™</sup> F45

ePTFE Membrane Cartridge Filters

## FluorofII<sup>TM</sup> F45 cartridges are manufactured using a highly hydrophobic ePTFE membrane offering exceptionally high gas flow rates at low pressure differentials.

FluorofII<sup>™</sup> F45 cartridges are recommended for gas filtration and venting applications. The hydrophobic characteristics of the ePTFE membrane makes the FluorofII<sup>™</sup> filter cartridge particularly suitable for wet gas applications, such as fermenter air feed. For solvent and aggressive chemical filtration applications, these cartridges offer a wide range of chemical compatibility with high thermal stability.

#### **Integrity Testing**

Each Fluorofil<sup>™</sup> F45 module of every cartridge is individually integrity tested using the Diffusive Flow Test, which correlates to the HIMA and ASTM F838-20 bacterial challenge tests. Non-destructive integrity tests, such as Diffusive Flow, Water Intrusion, Pressure Hold and Bubble Point, can be performed by customers. Please contact Porvair for procedural details.

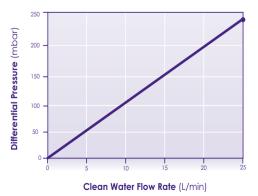

#### **Gas Flow Rates**

• Typical clean air flow rate: A 254mm (10") Fluorofil<sup>™</sup> F45 0.45µm single cartridge exhibits the flow- $\Delta P$  characteristics indicated below.

#### **Clean Water Flow Rates** (after Solvent Pre-wet and Water Flush)

- Typical clean water flow rate:
  - A 254mm (10") Fluorofil<sup>™</sup> F45 single cartridge with 0.45μm microbial rating exhibits the flow-ΔP characteristics indicated below, for solutions with a viscosity of 1 centipoise.
- Other solutions: • For solutions with a viscosity other than 1 centipoise, multiply the indicated differential pressure by the viscosity in centipoise.
